

CHAPTER V

CONCLUSION AND SUGGESTION

After finding and interpretation the research result, the last step in this research is making conclusion and giving suggestion that related to the conclusion.

A. Conclusion

Based on the result of calculation, it was obtained that the value of t observation (t_o) was 0,000 and degree of freedom (d_f) was 48. In the table value of degree of significance was 0,05. Comparing those values, the result was $0,000 < 0,05$ which means t-observation (t_o) score was smaller than t-table (t_t) score. In other word, the Alternative Hypothesis (H_a) was accepted and the Null Hypothesis (H_o) was rejected.

It can be concluded that Number Head Together (NHT) technique was effective to use in teaching reading ability of narrative text. It can be seen from table 4.5 group statistic of mean experimental class that was taught by using Number Head Together (NHT) technique was higher (82,24) than that of controlled class (70,88).

B. Suggestion

There are some suggestion for teachers, students, and future researcher can be listed as follow:.

The suggestion are as follow:

1. For the teachers

The teacher has to know kind of suitable teaching for the member of class. The suitable technique of teaching can make the teaching and learning process not only run well but also enjoyable and interesting for

students. Referring to the result of the studying with Numbered Head Together technique is more effective to teach reading. The students more enjoy learning English and more easily understand the reading text. Therefore, it is recommended for teacher to apply it in teaching and learning activities.

2. For The students

The students should be active in teaching and learning process and do more practices in reading. Do more practices in reading a lot text can increase and help them to comprehend reading text easily and it can improve their comprehension.

3. For the researcher

For the researcher who want to conduct the research can use the result of the research as the basic way for conducting the research in more detail. Moreover, the researchers can complete the weakness of the result of this research to be more perfect. Therefore, the result of the research is acceptable by all the readers.
